# Functionalities of the Product

It aims to develop the backbone necessary to support the integrated digital health infrastructure of the country. It will bridge the existing gap amongst different stakeholders of the Healthcare ecosystem through digital highways.

# Objectives

To establish state-of-the-art digital health systems, to manage the core digital health data, and the infrastructure required for its seamless exchange

To create a system of personal health records, based on international standards, easily accessible to individuals and healthcare professionals and services providers

To promote a better management of the health sector leveraging health data analytics and medical research

To ensure national portability in the provision of health services

Expected to significantly improve the efficiency, effectiveness, and transparency of health service delivery overall.

# Product Specifications

## Unique Health Id

Every user who will register will get a unique health ID.

## Common Database

There will be a single common database with medical history of all citizens of country

## Nearby Healthcare Facilities

Real Time Bed availability status and other related information regarding nearby healthcare facilities

## Symptom Checker

Shows the list of possible conditions. Not an actual diagnosis

## Hassle Free

Reduces the hassle of carrying multiple papers and prescriptions by going digital

# Technologies Used

Front end development is being done on HTML ,CSS and Javascript.

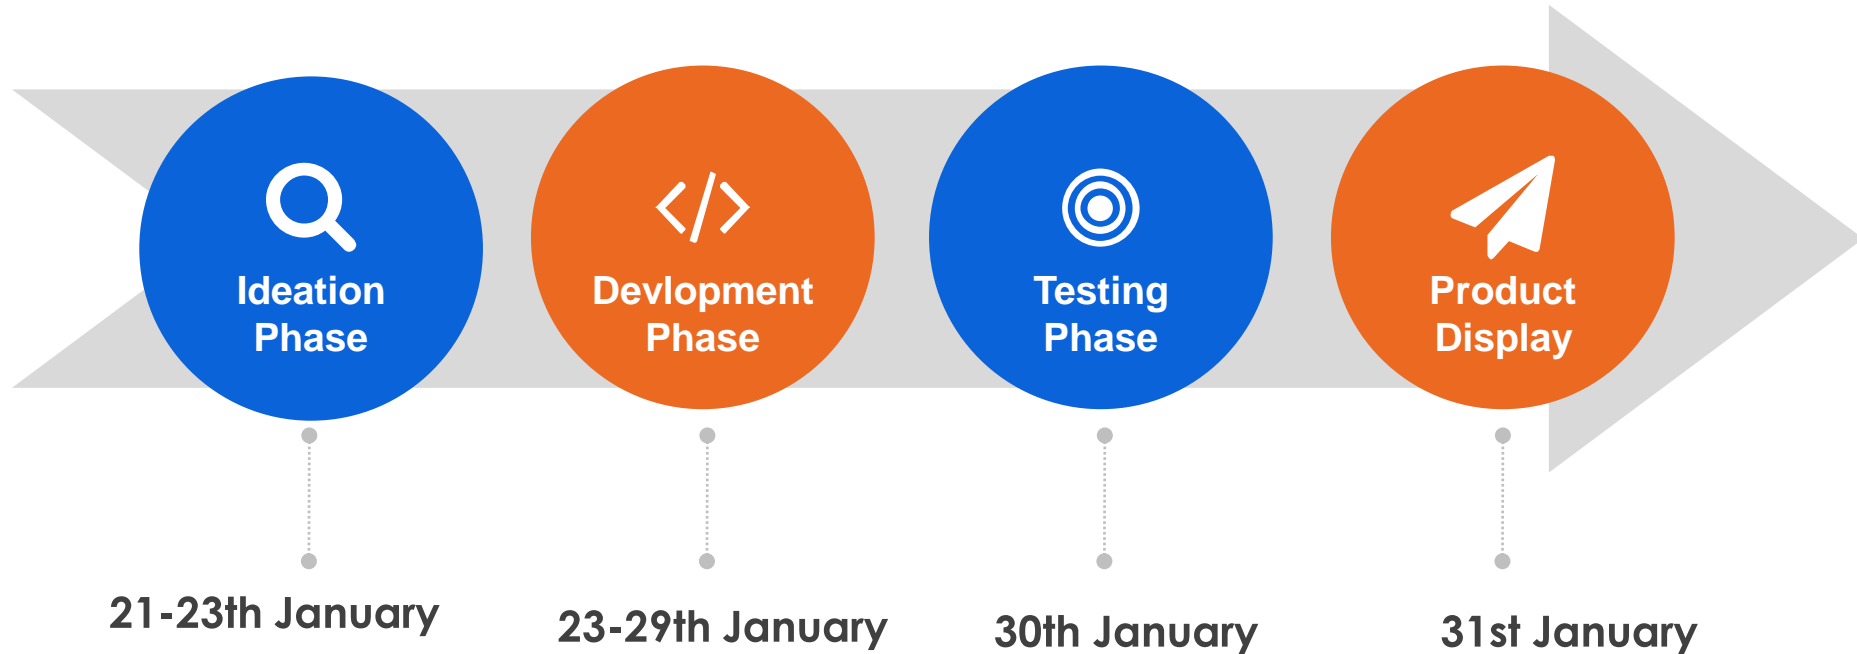

Backend development is being done on MERN stack.

Some APIs are being used which include GoogleMaps and Places API.

# Execution Plan

THANK  
YOU FOR  
WATCHING
